

As an individual you will upload a text document to the team repository where you each week reflect on the following questions

- what do I want to learn or understand better?
- how can I help someone else, or the entire team, to learn something new?
- what is my contribution towards the team's application of scrum?
- what is my contribution towards the team's deliveries? That means that for the personal learning objective you will each week write down what you have achieved in relation to last week's ambition (technologies, concepts and skills learnt as well as how this was achieved), what you would like to achieve for the next week and how to make the change happen. The first week of the course you describe the current situation by motivating a learning objective. It is perfectly fine to change objective/s each week as long as you can motivate the change and you evaluate the outcome of the previous week (e.g. describing the current situation).

This weeks reflection will be a bit vague, since the "real" project is yet to be started. What I will do is that I will give my thoughts on what learning outcome of the exercises and the lectures, and some general base-line thoughts about the course.

The reason I chose this course is that it seems like a good preparation for the working life, and get some real hands-on experience of how developing software could look like. I do really hope I get to pick up some technical skills such as API's and frameworks for the project, but I'm also looking forward to be developing some software with a real time, following Scrum's social framework.

Technical learning objective for next week:

The project will start next week on Wednesday, so until then I'll spend about four hours looking up how Git works when collaborating on a project. On Wednesday I believe we will have short meeting to decide a little bit what should be done during Eastern, and look a little bit to get a brief understanding of the code. This will be done with various tutorials / internet articles

Non-technical learning outcomes for next week:

When we have set the social contract for the group, decided on level of ambition within the group I am going to spend some time reading up more on scrum / agile development.

The exercises gave me a brief, but better understanding of the things that can go wrong, and also gave me the tools of trying to prevent as much as possible. The things that I contributed with in the exercise was that when circumstances changed I was pretty quick to pick up and try to do the job that was required to get done.
