- what do I want to learn or understand better?
    - Since 5 out of 8 persons   of our group got the development environment to work I now want to learn React framework better so that I until next week can produce a hello word blank page

- how can I help someone else, or the entire team, to learn something new?
    - Mostly by reading and discussing different topics on the React framework,
    - create structure in our back / sprintlog, breaking down epics and creating smaller user stories.
    - Continue helping out with environment.

- what is my contribution towards the team's application of scrum?
    - This week has been to sharing my solutions to get development environment with either other groups in slack, or teammates in our private channel.
    - Getting some structure to our user stories
        - Trying to "slice the cake"

- what is my contribution towards the team's deliveries? That means that for the personal learning objective you will each week write down what you have achieved in relation to last week's ambition (technologies, concepts and skills learnt as well as how this was achieved), what you would like to achieve for the next week and how to make the change happen. The first week of the course you describe the current situation by motivating a learning objective. It is perfectly fine to change objective/s each week as long as you can motivate the change and you evaluate the outcome of the previous week (e.g. describing the current situation).

The last week has been all about getting the development environment to work, and to get a bigger picture of what the agent wants in the app, which was pretty much our only task for the whole week. I didn't do any personal reflection that was connected to development of the application, so I'll name this development week 1. And try to define my goals from this week.

What I learnt/contributed toward the team last week:

- By applying scrum 'for real' the first week I have been getting better insights of what it is to develop in agile methods.
- Setting up my development environment. **Technichal goal**

Next week:

- Learn the react framework better, create a hello world page for incoming ships.

Spent hours:

19 hours , 30 minutes. Majority of the time setting up development environment.
